

Your next upgrade starts with someone else's order.

Craft goods, carry them between floating cities, and earn Marks, the game's currency, to improve your boat.

Why trade matters

Goods stay at their harbor until someone moves them. A maker needs a carrier. A carrier needs cargo worth the trip.

Reedhaven

Refines fuel

Ironwake

Works metal

Bastion

Builds ships

Delivery at Reedhaven. From the September 12 recording with two controlled local houses.

Play the practice harbor: drift.timidan.xyz

A cargo rig lets your cutter carry a larger order.

You make the rig from workshop materials. Install it, then use the extra space on your next delivery.

4 timber

+

3 plates

+

1 repair kit

Cargo rig

The same fitting can be sold through the testnet market.

Standard cutter: 12 spaces

A 14-unit order does not fit.

With a cargo rig: 16 spaces

The full 14-unit order fits in one voyage.

The fitted cutter sails 10% slower. Use the extra capacity when it is worth the slower voyage.

Pay on Sepolia. Receive the fitting on Creditcoin.

Attestcoin lets the inventory contract check proof of a payment before it changes the owner.

Creditcoin

1. Reserve the fitting

The seller places the existing fitting in escrow. The contract holds it for a named buyer.

Ethereum Sepolia

2. Pay the seller

The buyer sends the exact test-ETH amount to DriftCheckout. The checkout pays the seller and records the order.

Attestcoin

3. Verify the payment

A service gets the proof. Attestcoin verifies it. DriftItems checks the successful checkout event and exact order ID.

Creditcoin + game

4. Install and use

DriftItems transfers the fitting once. The buyer installs it with game approval. Confirmed installation adds cargo space.

The payment stays on Sepolia. Ownership changes on Creditcoin.
No ETH or game currency moves between the chains.

A deadline alone never gives the fitting back.

Expiry stops new payments. The contract keeps the fitting reserved until it verifies which outcome occurred.

The buyer paid before the deadline

The proof can arrive later. A service restart does not cancel the order. A verified payment transfers the fitting to the buyer.

Buyer receives the fitting

The buyer did not pay before the deadline

Close the order on Sepolia to stop any later payment. Attestcoin verifies that closure before the seller gets the fitting back.

Seller receives the fitting

If a proof is unavailable

The fitting stays reserved. A paid order has no automatic refund.

The game still has a trusted operator

The server approves production and installation. The contracts have not had an independent security audit.

Play the game. Then inspect what the testnet trial proved.

Available now

Public practice harbor.
No account or wallet needed.

Shared play uses invitations and persistent houses. Testnet transactions are enabled with a limited operator budget.

Recorded on 10 September

Dedicated command-line test wallets completed the trial.

Payment proof after expiry and restart.
Buyer ownership and installation.
A useful 14-fuel delivery.
Recovery of an unpaid order.

Still to verify

A complete purchase through a real browser wallet.

Independent human play.
Performance on real devices.
Long-term economy balance.

The gameplay video uses two controlled local houses. Its testnet appendix refers to the September 10 trial. Those records show the demonstrated mechanics; they do not establish external player demand.

Follow the records.

Read the protocol, inspect the contracts, or open a transaction from the recorded trial.
